

Freedom From Spyware Scanner 2025 – User Guide (English Version)

Purpose and Vision

Welcome to the Freedom From Spyware Scanner – more than just a cybersecurity tool. This is a personal and compassionate initiative and program, born from real-world experience. After enduring a severe hacking incident that compromised finances and personal life, the developer – with over 30 years in Information Technology – transformed that adversity into purpose.

The goal is simple yet vital: help others stay safe online. This initiative is rooted in humanism, not commerce. There are no ads, no data collection, and no business model behind it. Just the guiding principle shared across spiritual traditions: “Help always, harm never.”

Why It's Not Open Source

This scanner is intentionally not open source. In the past, the developer was hacked via a compromised open-source component. To prevent abuse by bad actors, the internal detection methods remain protected—like a magician guarding the secrets of the trick, not from pride, but from necessity.

Key Features

Originally trained on mainframes in the 1980s, the developer brings deep knowledge of machine-level code and performance optimization. That background shapes a clean, stable, and intuitive scanner experience.

- No install required – just double-click and it runs.
- No internet required – it works entirely offline.
- Cross-platform – runs on both MacOS (Terminal) and Windows (Console).
- No data collection – nothing is tracked or stored.
- Embedded security layers – designed to resist reverse engineering and tampering.
- Resilient and reliable – compact, lightweight, and fully self-contained.
- Trusted detection – scans for dangerous spyware based on curated signatures.
- Real-world tested – both Mac and Windows versions were tested by close, trusted users.

How to Use the Program

1. Download the program from the official GitHub:
<https://github.com/SuryaSoftwareInitiative/SpywareScanner>
2. Double-click to run:
 - On Mac, it opens in Terminal.
 - On Windows, it opens in Console.
3. Read and accept the disclaimer:
 - The program is offered “as-is.”
 - It is for detection only – not for spyware removal.

4. Scan results:

- If spyware is found, note the name(s).
- Choose your next steps:
 - Use trusted antivirus/malware tools.
 - Ask someone experienced in cybersecurity for help.

5. To exit the program:

- Press Enter/Return, or close the window manually.

What This Program Does NOT Do

- It does not remove spyware.
- It does not update or connect online.
- It does not collect or transmit data.
- It is not a mobile app (desktop-only for now).

Your Privacy is Respected

This app is completely offline. It doesn't phone home, collect telemetry, or install anything. You control what happens next—whether you act on a detection or not.

Please Help Share the Word

This project thrives through word of mouth. If it helps you, consider helping someone else:

- Mention it to a friend or colleague.
- Share the GitHub link thoughtfully.

<https://github.com/SuryaSoftwareInitiative/SpywareScanner>

There are no popups, no ads, and no pressure. Just a free, private and professionally ethical tool to help people stay safe.

Thank You

This scanner is a labor of love. It is a personal response to a digital world that can be overwhelming. You are not alone—and now you have one more tool in your corner.

Stay safe. Stay free. Stay aware.

— The Surya Software Initiative
